# ADVANCED DRIVER ASSISTANCE SYSTEM

---

## Forward Collision Warning (FCW)

FCW system monitors the distance to the vehicle ahead, assesses collision risks, and provides audible and visual warnings in advance.

---

## Lane Departure Warning System (LDWS)

LDWS is a safety assistance system that detects unintentional lane deviations and alerts the driver through visual/audible warnings to prevent lane departure accidents.

---

## Lane Change Assist (LCA)

LCA monitors blind spots on the rear sides of the vehicle, alerts the driver when another vehicle approaches during a lane change, and helps reduce the risk of collisions.

---

## Moving Off Information System (MOIS)

MOIS is an assistive warning system that monitors real-time road and environmental conditions, providing early risk alerts, and enhancing driving safety.

---

---

## Blind Spot Information System (BSIS)

BSIS monitors vehicle blind spots on both sides and rear through onboard sensors. When detecting moving objects like vehicles or non-motor vehicles in these areas, it alerts the driver via visual/audible warnings to prevent collisions during lane changes or turns. The system provides warnings only.

---

## Intelligent Speed Assist (ISA)

ISA automatically detects the legal speed limit for the current road section and helps drivers avoid overspeeding through alerts or interventions, enhancing both safety and compliance.

---

## Driver Drowsiness and Attention Warning (DDAW)

DDAW monitors driver fatigue and attention levels in real time, providing audio/visual/tactile warnings in advance and reducing the risk of accidents caused by fatigue driving.

---

---

## Advanced Driver Distraction Warning (ADDW)

ADDW helps identify potential driver distraction and delivers timely alerts to support safer driving.

---

## Advanced Emergency Braking System (AEBS)

AEBS is an active safety system that monitors obstacles ahead through sensors such as radar and camera, automatically triggers braking when the driver fails to react in time, to prevent or mitigate collisions.

---

## Adaptive Cruise Control (ACC)

ACC maintains a preset speed while automatically adjusting to keep a safe distance from the vehicle ahead, reducing driver fatigue on long journeys.
